Working Prototype Known Problems Report

Product Name: Smart Account
Team Name: Smart Account
Date: 7/24/18

List of functions not working correctly (can lose up to 20 points)
1. In the "Home" page, we could not change the month. It could only show the records in current month. If we add records not in July, 2018, they could not show in the "Home" page. (It can show in the "Count" page.)
2. If you enter the "sign up" page, you can see a 'login' button. This 'login' button means go back to 'login' page.
3. Because we use local memory (greenDao), users cannot login in different devices.
4. We did not implement corresponding categories to income
5. When you type money (amount), you can only type a int. (which also means the smallest and the biggest number is -2147483648 ~ 2147483647.)
6. In the Home page and the Count page, very long comments will only show part.
7. This app can only add bills. (edit, delete do not implement.)

Suggested Test Cases:
1. Create an account, login, and add a new record.
2. Tap part of the diagram in Count page, and see what are in this categories.
3. Add more new records. And test the scroll in Home page, month selection in Count page.
